INTRODUCTION

A **Resume Maker Website** is an online platform that helps users create professional resumes quickly and easily. A resume is a formal document that provides information about a person's education, skills, achievements, and work experience. It is one of the most important documents required when applying for jobs, internships, or higher education programs. A well-organized resume creates a good first impression on employers and increases the chances of getting selected for an interview.

In today's digital world, companies receive many job applications for a single position. Because of this, recruiters often spend only a short time reviewing each resume. Therefore, it is very important that a resume is clear, well-structured, and professionally designed. However, many students and job seekers do not have the knowledge or skills needed to design a proper resume. They may struggle with formatting, arranging information, or choosing the correct sections for their resume.

The **Resume Maker Website** helps solve this problem by providing an easy and efficient way to create resumes. Instead of designing a resume from scratch, users can simply enter their personal information, educational qualifications, technical skills, projects, and work experience into the website. The system then automatically arranges this information into a professional resume format using predefined templates.

This website also allows users to choose from different resume templates and styles according to their needs. The user can preview the resume before downloading it. The final resume can be downloaded in formats such as PDF, which can be easily shared with employers or uploaded to job portals.

The main goal of this project is to simplify the resume creation process and make it accessible to everyone. It reduces the time and effort required to design a resume manually and ensures that the final document is professional and well-structured.

The Resume Maker Website is especially useful for students, fresh graduates, and job seekers who want to create a good resume quickly. By providing a simple interface and ready-made templates, the system helps users present their skills and qualifications effectively, improving their chances of getting job opportunities.

KEY COMPONENTS OF THE INVENTION

The key features of the invention are as follows:

- Easy to use interface
- Quick resume creation
- User registration and login
- Personal information input
- Education details section
- Skills and experience section
- Multiple resume templates

Main Features:

- **User-Friendly Interface** – Simple and easy-to-use website for creating resumes.
- **User Registration and Login** – Allows users to create accounts and save their resumes.
- **Resume Templates** – Provides different professional templates to choose from.
- **Data Entry Forms** – Users can enter personal details, education, skills, and experience.
- **Automatic Resume Generation** – System automatically creates a formatted resume.

How It Solves the Problems

- **Simplifies Resume Creation:** Users can create resumes easily by filling simple forms.
- **Saves Time:** Automatically generates a professional resume in a few minutes.
- **Provides Proper Format:** Uses ready-made templates to maintain correct resume structure.
- **No Design Skills Needed:** Users do not need technical or design knowledge.
- **Reduces Errors:** The system organizes information properly and avoids formatting mistakes.

FEASIBILITY STUDY

A **Feasibility Study** is done to determine whether the project is practical and possible to develop. It helps to check if the system can be implemented successfully using available resources, technology, and time.

1. Technical Feasibility

Technical feasibility checks whether the required technology and tools are available to develop the system. The Resume Maker Website can be developed using common web technologies such as **HTML, CSS, JavaScript, and a backend like PHP or Node.js with a MySQL database**. These technologies are widely available and easy to use, so the project is technically feasible.

2. Economic Feasibility

Economic feasibility checks the cost required to develop and maintain the system. The Resume Maker Website does not require expensive software or hardware. Most of the tools used are free or open-source. Therefore, the cost of development is low, making the project economically feasible.

3. Operational Feasibility

Operational feasibility checks whether the system will work effectively for users. The website is designed with a simple and user-friendly interface, so users can easily create resumes without technical knowledge. This makes the system operationally feasible.

4. Time Feasibility

Time feasibility checks whether the project can be completed within the given time period. Since the project uses simple technologies and a clear design structure, it can be developed within the planned project time.

5. Social Feasibility:

The system is useful for students and job seekers, helping them create professional resumes easily.

Need and Significance of the Project

- Many students and job seekers do not know how to create a professional resume.
- Designing a resume manually can be time-consuming.
- People often make formatting mistakes while creating resumes.
- A simple system is needed to help users create resumes quickly and correctly.
- The website provides ready-made templates that make resume creation easier.

Significance of the Project

- Helps users create professional and well-structured resumes.
- Saves time by automatically generating resumes.
- Improves presentation of skills, education, and experience.
- Useful for students, fresh graduates, and professionals.
- Provides easy editing and updating of resumes.
- Helps users make a good impression on employers.
- Supports quick downloading and sharing of resumes for job applications.

METHODOLOGY

The methodology describes the steps followed to develop the **Resume Maker Website**.

1. Requirement Analysis

In this step, the requirements of the system are identified. The information needed for resume creation such as personal details, education, skills, and experience is analyzed.

2. System Design

The structure of the website is designed. This includes designing the user interface, database structure, and resume templates.

3. Development

The website is developed using technologies such as HTML, CSS, JavaScript, and a backend like PHP or Node.js with a database.

4. Testing

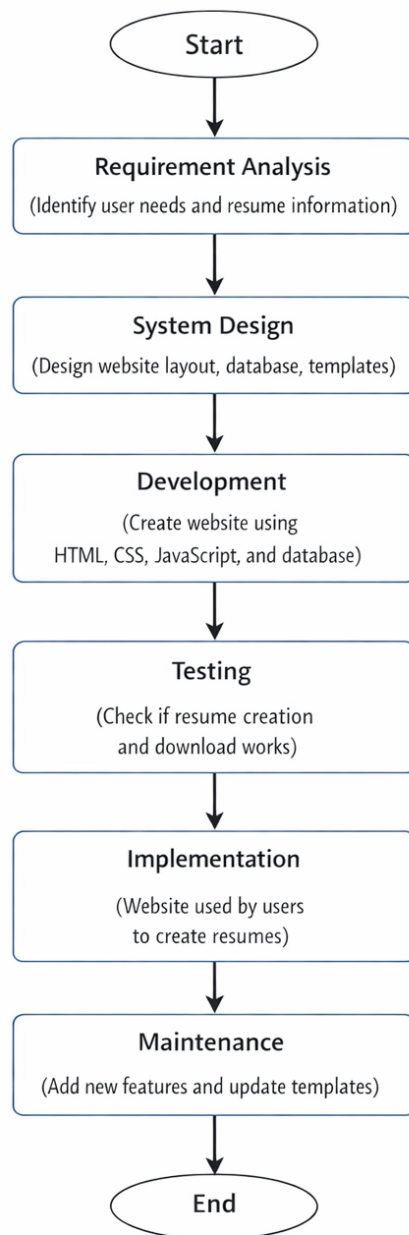

The system is tested to check whether all functions work properly, such as entering details, generating resumes, and downloading files.

5. Implementation

After testing, the website is made ready for users to create and download their resumes.

6. Maintenance

The system can be updated and improved by adding new templates and features in the future.

FACILITIES REQUIRED FOR PROPOSED WORK

To develop the **Resume Maker Website**, some hardware and software facilities are required. These facilities help in designing the website, managing user data, and testing the system.

1. Hardware Requirements

- **Computer or Laptop:** Used for developing and testing the website.
- **RAM and Storage:** Minimum 4GB RAM and sufficient storage for software and project files.
- **Internet Connection:** Required for research and testing.
- **Power Supply:** Continuous electricity for development work.

2. Front-End Development

Front-end is the part of the website that users see and interact with.

- **HTML:** Used to create the structure of the web pages.
- **CSS:** Used for designing and styling the website layout.
- **JavaScript:** Used to add interactive features like form validation and resume preview.
- **Bootstrap (optional):** Helps in creating responsive and attractive designs.

3. Back-End Development

Back-end manages the system operations and processes user data.

- **PHP or Node.js:** Used to handle server-side functions and resume generation.
- **Server Tools:** XAMPP or WAMP used for running the server locally.

4. Database

- **MySQL:** Used to store user information and resume details.
- **phpMyAdmin:** Used to manage and control the database.

5. Development Tools

- **Code Editor:** Visual Studio Code or Notepad++ for writing program code.
- **Web Browser:** Chrome, Edge, or Firefox for running and testing the website.

BIBLIOGRAPHY

The following resources were referred to during the study and development of the proposed project:

- W3Schools, Web Development Tutorials. Available at: <https://www.w3schools.com>
- Mozilla Foundation – Mozilla Developer Network (MDN), Web Development Resources. Available at: <https://developer.mozilla.org>
- Software Engineering, Pearson Education.
- HTML, CSS and JavaScript Documentation for Web Development.
- Oracle, MySQL Documentation. Available at: <https://dev.mysql.com/doc>
- Visual Studio Code Documentation for Code Editing and Development.
- Online resources and tutorials related to resume builder website development.
